PROFESSIONAL SUMMARY

Data Science MSc candidate (Heriot-Watt University, 2026) with practical experience developing predictive models, building ML pipelines, and delivering actionable insights from large datasets. Skilled in Python and SQL with a solid foundation in statistics, machine learning, and data analysis. Eager to contribute to a fast-growing tech environment, collaborating with cross-functional teams to build data-driven solutions that have real business impact.

TECHNICAL SKILLS

Languages & Libraries: Python (pandas, NumPy, scikit-learn, FastAPI), SQL, R, Java

ML & Statistics: Predictive Modelling, Classification, Regression, Clustering, Model Evaluation, A/B Testing

Data & Viz: EDA, Feature Engineering, Statistical Analysis, Tableau, Power BI, D3.js

Tools & Practices: Git/GitHub, Jupyter, Excel, Data Pipelines, Version Control

Deployment & MLOps: FastAPI backend deployment, pipeline automation, model lifecycle management

AI / NLP: LLM evaluation, multilingual NLP, bias & safety analysis

EDUCATION

MSc Data Science — Heriot-Watt University, Edinburgh, UK

2025 – 2026 (ongoing) | Modules: Machine Learning, Statistical Modelling, Big Data, Data Visualisation, Research Methods

- Dissertation: Analysed how AI model responses to mental health problem statements vary across languages, examining tone, bias, consistency, and safety — applying rigorous statistical and NLP evaluation techniques.
- Built a validated Hindi mental health dataset by translating and verifying 550 English prompts using IndicTrans2, enabling multilingual model benchmarking across languages.

BSc Computer Science — Kalinga University, Raipur, India

2017 – 2020

PERSONAL PROJECTS

AI Data Debugging Tool — Full-Stack ML Application

- Built an automated data cleaning system to handle missing values, outliers, and invalid formats at scale.
- Trained a Decision Tree classifier on dataset profiles (missing rate, skewness, outliers) to predict the correct cleaning action — an early example of ML-driven operational optimisation.
- Deployed via a multi-layer FastAPI backend covering detection, decisioning, and automated fixes; reduced manual cleaning effort by ~70% on 500+ row datasets.

Dataset Finder Platform — data-lab.co.uk

- Designed and deployed a web platform recommending top datasets based on relevance, quality, and research usage.
- Built a custom scoring and ranking system, delivering end-to-end product from backend logic to live deployment.

ACADEMIC PROJECTS

Food Recognition & Nutrition Estimation — ML Pipeline

- Built a multimodal ML pipeline on Food-101 (101,000 images, 101 classes) with recipe and nutrition datasets.
- Compared baseline and deep learning (CNN) models; achieved 91% classification accuracy and $R^2=0.92$ for nutrition regression — demonstrating strong model selection and evaluation skills.

COVID-19 Interactive Data Visualisation Dashboard

- Analysed 429K+ records across 36 variables to identify global trends across countries and time periods.
- Built interactive D3.js dashboards to present findings on cases, deaths, and government response to non-technical audiences.

VIRTUAL EXPERIENCE & JOB SIMULATIONS (JANUARY 2026)

Lloyds Banking Group — Data Science

- Developed a customer churn prediction model on 6,812 records using Python and scikit-learn (ROC-AUC = 0.82); applied feature engineering, model evaluation, and presented results clearly.

Quantium — Data Analytics

- Analysed 264,836 retail transactions using pandas and Excel to generate benchmarking and uplift-style insights supporting commercial decision-making.

Deloitte Australia — Data Analytics

- Delivered Tableau dashboards from forensic-style data analysis, translating complex findings into actionable recommendations for non-technical stakeholders.

PROFESSIONAL EXPERIENCE

Senior Technician — Dell Technologies, Bangalore, India

May 2022 – November 2024

- Diagnosed and resolved complex hardware and software issues using diagnostics and log analysis in a high-pressure environment.
- Reduced Repeat Dispatch Rate (RDR) to 4.2% and improved average first-response time by 5.8% through systematic root cause analysis.
- Demonstrated strong data-driven problem-solving, proactive communication, and ability to work effectively under pressure.

ADDITIONAL INFORMATION

Languages: English, Hindi, Marathi
