PROFESSIONAL SUMMARY

MSc Data Science candidate (Heriot-Watt University) with hands-on experience building AI-powered tools, automated data pipelines, machine learning models, and interactive dashboards. Proficient in Python and SQL with a strong grounding in statistical modelling, feature engineering, and predictive modelling. Passionate about applying state-of-the-art ML and AI techniques to solve real-world challenges in safety, compliance, and operational performance, with a proven ability to communicate findings clearly to both technical and non-technical stakeholders.

TECHNICAL SKILLS

Languages: Python (pandas, NumPy, scikit-learn, FastAPI), SQL, R, Java

ML / Modelling: Decision Trees, CNNs, Churn Prediction, Regression, Clustering, Model Evaluation, PyTorch, TensorFlow

Data & Viz: EDA, Feature Engineering, Statistical Analysis, Tableau, D3.js

Tools & Practices: Git/GitHub, Jupyter, Excel, Power BI

AI / NLP: LLM evaluation, multilingual NLP, IndicTrans2, bias & safety analysis

EDUCATION

MSc Data Science — Heriot-Watt University, Edinburgh, UK

2025 – 2026 | Modules: Machine Learning, Statistical Modelling, Big Data, Data Visualisation, Research Methods

Awarded: Merit | Distinction in Dissertation

- Dissertation: Analysed how AI model responses to mental health problem statements vary across languages, examining tone, bias, consistency, and safety implications.
- Built a validated Hindi mental health dataset by translating and verifying 550 English prompts using IndicTrans2, enabling multilingual evaluation across languages and highlighting response inconsistencies in LLMs.

BSc Computer Science — Kalinga University, Raipur, India

2017 – 2020

PERSONAL PROJECTS

DataLab — AI-Powered Data Analysis & Data Quality Platform | data-lab.co.uk

An end-to-end AI-powered platform combining automated data quality assessment, ML-driven cleaning, statistical analysis, AI-generated insights and interactive visualisation in a single workflow.

- Dataset Finder: AI-ranked dataset discovery with multi-factor reliability scoring; scoring system returns top 3 datasets per query.
- Debugger & Cleaner: Automated detection of missing values, duplicates, invalid formats and outliers; ML-assisted correction workflows (Decision Tree on dataset profiles) reduced manual cleaning effort by ~70% on datasets with 500+ rows.
- Data Visualiser: Automatic chart generation and interactive CSV-based dashboards for exploratory data analysis.
- Statistical Analyser: Distribution, correlation and feature relationship analysis with descriptive statistics and outlier detection.
- AI Insights Engine: Automated pattern detection, relationship discovery and natural-language summaries for rapid dataset understanding.
- Developed and deployed the full frontend-backend workflow using Python, FastAPI and D3.js; designed the product end-to-end as Founder & Developer.

AI Data Debugging Tool — Full-Stack ML Application

- Built an automated data cleaning system to handle messy datasets with missing values, outliers, and invalid formats.

- Trained a Decision Tree model on dataset profiles (missing rate, skewness, outliers) to predict the most appropriate cleaning actions.
- Developed a multi-layer FastAPI backend for issue detection, automated decisioning, and remediation; reduced manual cleaning effort by ~70% on datasets with 500+ rows.

ACADEMIC PROJECTS

Food Recognition & Nutrition Estimation — Machine Learning Pipeline

- Built a multimodal ML pipeline using Food-101 (101,000 images across 101 classes) alongside recipe and nutrition datasets.
- Compared baseline and deep learning models using Python and CNNs, achieving 91% classification accuracy and $R^2=0.92$ for nutrition regression.

COVID-19 Interactive Data Visualisation Dashboard

- Analysed 429K+ records across 36 variables to study global COVID-19 trends across countries and time.
- Built interactive D3.js dashboards revealing relationships between cases, deaths, and government stringency measures.

VIRTUAL EXPERIENCE & JOB SIMULATIONS (JANUARY 2026)

Lloyds Banking Group — Data Science

- Built a customer churn prediction model on 6,812 records (11 features) using Python and scikit-learn, achieving ROC-AUC = 0.82. Applied feature engineering and model evaluation best practices aligned with production-grade ML standards.

Quantum — Data Analytics

- Analysed 264,836 retail transactions (8 variables) using pandas and Excel, generating benchmarking and uplift-style trial insights to support commercial decisioning.

Deloitte Australia — Data Analytics

- Conducted forensic-style analysis on structured records using Excel and Tableau; delivered dashboards supporting investigative decision-making for non-technical stakeholders.

PROFESSIONAL EXPERIENCE

Senior Technician — Dell Technologies, Bangalore, India

May 2022 – November 2024

- Diagnosed and resolved complex hardware and software issues using diagnostics and log analysis in high-pressure environments.
- Reduced Repeat Dispatch Rate (RDR) to 4.2% through systematic root cause analysis and process improvements.
- Achieved an average first-response time improvement of 5.8%, improving service continuity and customer satisfaction.

ADDITIONAL INFORMATION

Languages: English, Hindi, Marathi
